

# 1990 VOLVO 240 Owner's Manual

## U.S.A. & Canada

### Essential Information

Please take the time to fill out the forms on this page. When completed, these forms will provide information essential to the proper servicing and ordering of parts for your Volvo.

Owner

Name \_\_\_\_\_

Address \_\_\_\_\_

City, State \_\_\_\_\_ Zip/Code \_\_\_\_\_

Tel. No \_\_\_\_\_

Notice:

Your Volvo is designed to meet all applicable safety and emission standards, as evidenced by the certification labels attached to the door opening sheet metal and on the left wheel housing in the engine compartment. For further information regarding these regulations, please contact your dealer.

Vehicle Information (see "Label information" section)

Vehicle License Number \_\_\_\_\_

Vehicle Identification Number (VIN) \_\_\_\_\_

Service Designation Number \_\_\_\_\_

Engine Designation \_\_\_\_\_ See "Specifications" section

Color Code \_\_\_\_\_

Upholstery \_\_\_\_\_

Tire designation \_\_\_\_\_ See "Tires" section

Vehicle Capacity \_\_\_\_\_

VOLVO NORTH AMERICA CORPORATION

### Contents

Important

You should be familiar with the information in the first two chapters before you operate the car. Information contained in the balance of the manual is extremely useful and should be studied shortly after operating the vehicle for the first time. The manual is structured so that it can be used for reference. It should thus be kept in the car for ready access.

All information, illustrations and specifications contained in this manual are based on the latest product information available at the time of publication. Volvo reserves the right to make model changes at any time, or to change specifications or design, without notice and without incurring obligation.

### [Introduction to the manual 2](#)

### [Before you drive 7](#)

This section provides a detailed description of the vehicle's instruments and controls.

### [Operating the car 41](#)

This section contains items such as starting the engine, operating gear selector, towing trailers.

### [Service and maintenance 53](#)

An investment which will pay dividends in the form of improved reliability, durability, and resale value.

### [Specifications 97](#)

All specifications are subject to change without notice. Consult your Volvo dealer for information.

Should you require more detailed information please contact your Volvo dealer.

pg. 2 This manual deals with the operation and care of your Volvo

Welcome to the world-wide family of Volvo owners. We trust that you will enjoy many years of safe driving in your Volvo, an automobile designed with your safety and comfort in mind. To ensure your satisfaction with this vehicle, we encourage you to familiarize yourself with the equipment descriptions, operating instructions, and maintenance requirements/recommendations in this manual. We also urge you and your passengers to wear seat belts at all times in this (or any other) automobile. And of course, please do not operate a vehicle if you may be affected by alcohol, medication, or any impairment that could hinder your ability to drive.

Your Volvo is designed to meet all applicable safety and emission standards, as evidenced by the certification labels attached to the door opening sheet metal and on the left wheel housing in the engine

compartment. For further information regarding these regulations, please contact your dealer.

### pg. 3 Seat belts: "Something We Believe In"

Despite our strongest recommendations, and your best intentions, not wearing a seat belt is like believing "It'll never happen to me!". Volvo urges you and all adult occupants of your car to wear seat belts and ensure that children are properly restrained, using an infant, car or booster seat determined by age, weight and height.

Fact: In every state and province, some type of child-restraint legislation has been passed. Additionally, most states and provinces have already made it mandatory for occupants of a car to use seat belts. So, urging you to "buckle up" is not just our recommendation - legislation in your state or province may mandate seat belt usage. The few seconds it takes to buckle up may one day allow you to say, "It's a good thing I was wearing my seat belt".

### pg. 4 General Information

Do not export your Volvo to another country before investigating the country's applicable safety and exhaust emission requirements. In some cases it may be difficult or impossible to comply with these requirements. Modifications to the emission control system(s) may render your Volvo not certifiable for legal operation in the U.S., Canada or other countries.

Model versions of the basic Volvo Models 240, 240 DL

USA: Canada:

240 4-door, Wagon 240 DL 4-door, Wagon

240 DL 4-door, Wagon

### pg. 5 Keys

**Owner's Key**

This key operates all locks in the vehicle

**Service Key**

Front doors

Starting (ignition)/steering wheel lock

The key number codes are stamped on a separate tag supplied with the keys. This tag should be

separated from the key ring and kept in a safe place.  
The double-sided tape on the back of the tag can be used to secure it safely.  
In the event the original keys are lost, duplicates may be ordered from your Volvo dealer.

Number tag

R Bulb failure warning light (yellow)

S Overdrive OFF indicator light (yellow)

(automatic transmission models)

Shift indicator light (yellow)

(manual transmission models)

[Contents](#) | [Top of Page](#)

The warning lights described on this page should never be on when driving

When the ignition is turned on, and before the engine starts, all of the warning lights should be on to test the function of the bulbs. Should a light not go off after the engine has started, the system indicated should be inspected. (However, the parking brake reminder light will not go off until the parking brake is fully released.)

Alternator warning light (red)

If the light comes on while the engine is running, check the tension of the alternator drive belt as soon as possible. (See section titled "Cooling system".)

**NOTE:** This warning light is illuminated if the alternator is not charging. However, alternator, parking brake, brake failure, and bulb failure will be illuminated at the same time due to the design of the system

Parking brake reminder light (red)

This light will be on when the parking brake (hand brake) is applied. The parking brake lever is situated between the front seats. Canadian models are equipped with this warning light:

Bulb failure warning light (yellow)

The light will come on if any of the following bulbs are defective:

- one of the lower beams
- one of the tail lights
- one of the brake lights (when the brake pedal is depressed).

See section on "Replacing Bulbs."

Oil pressure warning light (red)

If the light comes on during driving, the oil pressure is too low. Stop the engine immediately and check the engine oil level. See section titled "Engine Oil". Do not continue to drive the car with this light on.

After hard driving, the light will come on occasionally when the engine is idling. This is normal, provided it goes off when the engine speed is increased.

Brake failure warning light (red)

If the light comes on while driving and the brake pedal can be depressed further than normal, it is an indication that one of the brake circuits is not functioning. Stop immediately, open engine hood and check brake fluid level (see section "Brake fluid, power steering").

Reservoir empty: do NOT drive. Tow car to shop for check/repair of brake system. Reservoir not empty: proceed immediately and with caution to a Volvo dealer for an inspection of the brake system.

Canadian models are equipped with this warning light: 

pg. 12 Service reminder light, Clock, Ambient temperature gauge

Supplemental Restraint System (SRS)

If the light comes on (or stays on after the vehicle has started), the SRS diagnostic system has detected a fault. Take the car to an authorized Volvo dealer for an inspection of the system. See the SRS section for more information.

Service reminder light

This light will come on at 5,000 mile (8,000 km) intervals. It is a reminder to the driver that the 5,000 mile (8,000 km) service interval has been exceeded. The light will stay on 2 minutes after start until reset by the servicing dealer.

Check Engine warning light

If the light comes on (or stays on after the vehicle has started), the Engine Check diagnostic system has detected a fault. Drive to an authorized Volvo dealer for inspection.

Quartz crystal clock

Ambient temp. gauge (accessory)

To reset the hands, push in the reset knob and turn.

An electronic thermometer that indicates ambient temperature just above the road surface. Warns you of icy road conditions.

pg. 13 Oil pressure gauge, Voltmeter.

Oil pressure gauge (accessory)

Voltmeter (accessory)

The oil pressure gauge indicates the pressure of the oil in the lubricating system of the engine. The pressure is dependent on the speed of the engine, the oil temperature and the viscosity of the oil.

The voltmeter indicates the voltage in the electrical system and thereby also the state of the battery. While the car is being driven the pointer

*Classic Cars & Cycles*

The gauge pointer must not go down to the red field while driving.

Do not continue to drive the car with the pointer in the red zone.

should be within the black field.

Should the pointer point to the upper or lower red field when driving, this may indicate some fault in the electrical system.

Note: While idling with a hot engine the pointer may go into the red field. This is not a cause for concern providing the pointer rises to the normal driving range again when you increase the engine speed.

Note: While idling with a hot engine (especially with air conditioning ON), the pointer may indicate low voltage. This is not a cause for concern provided that the indicated voltage increases when you increase engine speed.

[Contents](#) | [Top of Page](#)

## Starting (ignition) switch/steering wheel lock

O Locked position: remove the key to lock the steering wheel.

I Intermediate position: certain circuits (heater blower, cigarette lighter, accessories, etc.) on.

II Drive position: key position when engine is running.

III Starting position: release the key when engine starts. The key returns automatically to drive position.

The steering wheel lock may be under tension when the car is parked. Turn the steering wheel slightly to free the ignition key.

A chime will sound if the starting key is in the ignition lock and the front door on the driver's side is open. The chime will also sound if the headlights or parking lights are on when the door is open. The chime goes off when the front door is closed.

Turn signals

1 Signal lever engaged for normal turns.

Note: A defective turn signal bulb will cause turn signal indicator and remaining signal lights to flash more rapidly than normal.

2 Lane change position. In maneuvers such as lane changing, the driver can flash the turn signals by moving the turn signal lever to the first stop and holding it there. The lever will return to the neutral position when released.

3 High and low beam switching (Headlight switch in position ). Move the lever towards the steering wheel and release it.

3 Headlight flasher (Headlight switch in position  or 0). Move the lever towards the steering wheel. The headlight high beam will be on until the lever is released.

Rear fog lights

The rear fog lights are considerably brighter than the normal tail lights and should be used only when atmospheric conditions, such as fog, rain, snow, smoke or dust reduce the daytime or nighttime visibility of other vehicles to less than 500 ft. (152 meters). (The headlights must be switched on.)

Note: Local regulations governing the use of these lights may vary.

Headlights and position lights

0 All lights off\*

 Parking lights on\*

 Headlights and parking lights on

Switch from upper to lower beams, and vice versa, by moving the turn signal switch lever on the left side of the steering column towards the steering wheel. The parking lights can be used without switching on the starting (ignition) key.

\* Canadian models equipped with daytime running lights: Headlights and parking lights on when

*Classic Cars & Cycles*

*www.ClassicCycles.org*

starting (ignition) switch is switched on.

A chime will sound if the starting (ignition) key is in the switch lock when the door is open. The chime goes off when the driver's door is closed. If the headlight switch is in position , all lights will go out when starting (ignition) switch is switched off.

Instrument panel lamps rheostat

Clockwise - brighter

Counterclockwise - dimmer

pg. 16 Windshield wipers, Tailgate window wiper, Washer nozzles

Wiper/washer

1 Intermittent wiper

With switch in this position, the wipers will make a stroke approx. every seventh second.

2 "Single stroke" position

Switch returns automatically when released.

3 Wipers, low speed

4 Wipers, high speed

5 Windshield wiper/washer

The wiper will make 2-3 complete stroking cycles after the lever is released

Tailgate window wiper/washer, wagon

Operated by the switch at the end of the windshield wiper/washer operating lever.

1 Tailgate wiper ON

2 Interval position

With the switch in this position, there is one stroking cycle approx. every fifteen seconds.

3 Tailgate washer

Depress the button to start the wiper/washer. The wiper will complete 2-3 stroking cycles after the button is released.

Adjusting washer nozzles

The fluid spray may be adjusted by carefully inserting a needle into the metal nozzle and rotating the nozzle to the desired position.

4-8" = 10-20 cm.

12" = 30cm.

pg. 17 Cruise Control

Cruise Control  
(optional on certain models)

The cruise control switches are located on the turn signal switch lever.

To engage and set desired speed:

1. Set switch (1) to ON.
2. Accelerate to desired cruise speed.

**NOTE:** the cruise control cannot be engaged at speeds below 22 mph (35 km).

3. Depress SET SPEED switch (2).

Operating brake pedal or clutch pedal (where applicable)

This will automatically disengage the cruise control. Previously selected cruise speed is retained in the memory and by momentarily setting the switch to RESUME position that speed will be re-engaged.

If the cruise control is already engaged, the cruising speed can be increased by depressing the SET SPEED button (2). The vehicle will then maintain the current speed.

**WARNING!**

The cruise control should not be used in heavy traffic or when driving on wet or slippery roads. If the gear shift is moved to Neutral while the cruise control is engaged, then depress the brake pedal momentarily, or set the cruise control switch (1) to OFF. This will disengage the cruise control and prevent overrevving the engine.

**NOTE:** When driving on a grade, actual vehicle speed may vary slightly from the set cruise control speed.

Acceleration

Momentary acceleration, such as for passing, does not interrupt cruise control operation. The previously selected speed will be maintained without having to set switch to RESUME.

To disengage the cruise control system:

Set switch (1) to position OFF, or depress brake pedal, or depress clutch pedal (where applicable). Switching off the starting (ignition) switch will automatically disengage the cruise control system.

Washer fluid reservoir

The washer fluid reservoir for the windshield and tailgate washer (wagon) is located in the engine compartment and holds approx. 0.8 US gals = 3.2 liters. During wintertime, the reservoir should be filled with antifreeze washer fluid specified in section titled "Cold weather".

Rear window demister

To operate depress the switch. The indicator lamp in the switch will come on. The system will be switched off automatically after 10 - 15 minutes or when the starting (ignition) key is switched off. Do not place items against the inner surface of the rear window that may damage the printed circuit. Do not scrape the inner surface of the rear window glass with a hard object or use an abrasive window

cleaner, otherwise damage to the printed circuit will occur.

## Hazard warning flasher

The four-way flasher should be used to indicate that the vehicle has become a traffic hazard.

Note: Regulations regarding the use of the hazard warning flasher may vary from state to state.

pg. 19 Parking brake

Parking brake (hand brake)

The lever is situated between the front seats. The brake is applied to the rear wheels.

The PARKING BRAKE reminder light on the instrument panel comes on whenever the parking brake lever is not fully released and the ignition is on.

Always use the parking brake (hand brake) when parked.

In order to obtain the best possible performance of the parking brake, the brake linings should be broken in. (See section titled "Break-in period".)

## Seat heaters

The front seats are equipped with electrically-heated backrests and seat cushions. The switches engage the heating which then is thermostatically controlled. It switches on automatically when the temperature drops below 60°F (15°C) and switches off at approx. 95°F (35°C).

pg. 20 Cigarette lighter, Ash trays

Cigarette lighter

To operate, depress the knob fully. When the knob automatically releases, the cigarette lighter is ready for use.

The starting (ignition) switch must be ON for the cigarette lighter to function.

Ash trays

To remove the ash trays depress the center spring and remove.

pg. 21 Electrically-operated windows

Electrically-operated windows  
(standard on certain models)

The electrically-operated windows are controlled by switches set in the door arm rests. All the windows can be controlled from the driver's arm rest as shown in the above illustration.

The starting (ignition) switch must be ON for the electrically-operated windows to function. The window is lowered if the rear part of the switch is pressed and raised if the front part of the switch is pressed.

Warning: Remove the starting (ignition) key from the car when children are left alone in the car.

Cut-out switch for rear-door electrically-operated windows

If the car is equipped with rear-door power windows, this function can be disabled by a switch located on the driver's door armrest. This switch is positioned 90° in relation to the other switches.

The rear door windows can be raised or lowered with the respective door switch as well as the switch on the driver's door.

The rear-door windows cannot be raised or lowered with the respective door switch but instead only with the corresponding switch on the driver's door.

[Contents](#) | [Top of Page](#)

## Heating system

1 TEMP  
Left = cool  
Right = warm

2  FLOOR  
Out = no air to floor  
In = full flow

3  Defrost  
Out = low volume air flow to defroster  
In = full flow

4  REC (recirculation)  
To be used only on cars equipped with air conditioning.  
Do not use for heating.  
Out = full flow of outside air  
In = air is recirculated for faster cooling

## 5 Blower motor

Has 4 speeds and is shut completely off when the knob is turned to the left.

## 6 Air louvers - dash

The air flow through the louvers is decreased when the  (2) and/or  (3) controls are depressed.

pg. 23 Heating and ventilation

How to...

... obtain max. heat

### 1 TEMP WARM

2  depressed

5 FAN  3 (or 4)

6 All dash louvers halfway open.

...remove condensation

### 1 TEMP WARM

3 DEF  depressed

5 FAN  3 (or 4)

6 All louvers closed.

Always keep front external inlet grille (in front of the windshield) clear of obstructions (snow, ice, etc.).

Maximum defroster action

For maximum defroster capacity at very low ambient temperatures, use the recirculation control (button depressed).

If not using air conditioning, the recirculation feature should not be used in humid climates and at temperatures above +23°F (-5°C).

Air louvers - dash

- A Closed
- B Open
- C Directing air flow horizontally
- D Directing air flow vertically

pg. 24 Air conditioning

Air conditioning  
(standard on certain models)

[www.ClassicCycles.org](http://www.ClassicCycles.org)

How to use the air conditioner:

1  Fan

Position 4 for rapid cooling.

2 AIR COND

Start the air conditioning compressor by turning the control knob clockwise toward MAX.

For rapid cooling, position the knob into the orange range beyond MAX. After desired temperature is reached re-position the control knob into the blue range.

At cruising speeds, the knob should be kept within the blue range. If it remains in the orange range, icing may occur resulting in decreased cooling capacity.

3  Recirculation

Push in for rapid cooling and during high humidity conditions.

4 TEMP

When using the air conditioner for cooling, the TEMP control should be set to COOL position, fully left. Use the AIR COND control to regulate the temperature.

To obtain rapid cooling, all windows must be closed and buttons  and  out. Cool air will then be discharged through the four dash outlets which should be fully open.

Note: For rapid removal of condensation from inside glass surfaces, the air conditioner can be switched on even when not required for interior cooling. The air conditioner will dehumidify the air inside the vehicle.

Have your Volvo dealer check the system for correct operation yearly. The air conditioning system should be operated periodically to ensure trouble-free performance year round.

pg. 25 Audio systems

Operating instructions are contained in the manuals associated with each model. These manuals are placed in the cars when the equipment is installed. Your Volvo Dealer will be able to assist you with any questions regarding the operation of this equipment.

## Radio antenna mast

Note: Always lower the antenna mast when entering automatic car wash. Retractable antennas should be cleaned and lubricated every 5,000 miles (8,000 km). On fixed (removable) mast antennas, be sure to unscrew and remove the antenna before entering an automatic car wash or a garage with low overhang.

The following information may help to explain differences between car radio reception and radio reception in the home.

## Signal sending

FM waves do not follow the earth's surface and do not bounce against the atmosphere as AM waves do.

## Cross modulation

When receiving a weak signal in the vicinity of another, stronger signal, both stations may be received simultaneously.

## Weak reception (fading)

Because of the limited range of FM senders and the way FM waves spread, this problem usually occurs with FM reception.

Mountains or similar obstacles can sometimes cause disturbances.

## Multipath Distortion

FM Signals are typically "line-of-sight", and very reflective. Their reflectivity to objects such as buildings, mountains, even other passing vehicles, causes the condition known as multipath distortion. This distortion is the result of the reflected signal, and the direct signal reaching your antenna at slightly different times causing a cancellation of all signals. This condition will sound like hissing, or static. Very little can be done to eliminate this problem, however, lowering the treble on your radio could help mask these disturbances thereby allowing you to achieve optimum pleasure from your audio system.

[Contents](#) | [Top of Page](#)

## Child safety

Volvo recommends the proper use of restraint systems for all occupants, including children. Remember that regardless of age and size, a child should always be properly restrained in a car. Restraint systems for children are designed to be secured in the vehicle by lap belts or the lap portion of a lap-shoulder belt. Such child restraint systems can help protect children in cars in the event of an accident only if they are used properly. However, children could be endangered in a crash if the child restraints are not properly secured in the vehicle. Failure to follow the installation instructions for your child restraint can result in your child striking the vehicle's interior in a sudden stop.

Holding a child in your arms is NOT a suitable substitute for a child restraint system. In an accident, a child held in a person's arms can be crushed between the vehicle's interior and an unrestrained person. The child could also be injured by striking the interior, or by being ejected from the vehicle during a sudden maneuver or impact. The same can also happen if the infant or child rides unrestrained on the seat or in the cargo section of a station wagon. Other occupants should also be properly restrained to help reduce the chance of injuring or increasing the injury of a child.

All states and provinces have legislation governing how and where children should be carried in a car. Recent accident statistics have shown that children are safer in rear seating positions than front seating positions when properly restrained.

A child restraint system can help protect a child in a vehicle. Here's what to look for when selecting a child restraint system:

- It should have a label certifying that it meets applicable Federal Motor Vehicle Safety Standards (FMVSS 213-80) - or in Canada, CMVSS 213.
- Make sure the child restraint system is appropriate for the child's height, weight and development - the label required by the standard or regulation, or instructions for infant restraints, typically provide this information.
- In using any child restraint system, we urge you to carefully look over the instructions that are provided with the restraint. Be sure you understand them and can use the device properly and safely in this vehicle.
- A misused child restraint can result in increased injuries for both the infant or child and other occupants in the vehicle.

When a child has outgrown the child safety seat (approximately 4-5 years of age, depending on size) you should use the rear seat with the standard seat belt fastened. The best way to protect the child here is to place the child on a cushion so that the seat lap belt is as far down on the hips as possible.

A specially designed and tested safety cushion for this purpose can be obtained from your Volvo dealer.

If necessary, an extra seat is available for use in the luggage compartment of station wagon models. This seat is designed for two children, each up to 80 lbs. in weight and up to 53 inches in height.

pg. 27 Child safety

Child Restraint Anchorages

Volvo cars are fitted with child restraint top tether anchorages in the rear seat.

There are three anchorages under the rear section of the car's rear window shelf on sedans and in the back of the rear seat in wagons. When the car is delivered, the holes for these anchorages are covered by plastic screws. In cars designated for Canada, one top tether anchorage set will be in the glove box. The top tether anchorage set includes the top tether anchorage plate, an M8 bolt (30 mm long) and a plastic trim cover. If another set is needed, consult your Volvo dealer.

### Installing the top tether

Remove the plastic screw covering the anchorage point you want to use. This can be done with a suitable coin. The screw is removed counterclockwise.

Place the top tether anchorage plate as shown in the illustration. Using the M8 bolt, tighten securely, to 16 i 2.5 ft. lbs. Place the plastic trim plate over the anchorage plate, if desired.

**WARNING!**

Child Restraint Anchorages are designed to withstand only those loads imposed by correctly fitted Child Restraints. Under no circumstances are they to be used for adult seat belts or harnesses. The anchorages are not able to withstand excessive forces on them in the event collision if full harness seat belts or adult seat belts are installed to them. An adult who uses a belt anchored in a Child Restraint Anchorage runs a great risk of suffering severe injuries should a collision occur.

pg. 28 Seat belts

Always fasten the seat belts before you drive or ride.

Two lights will be illuminated for 4-8 seconds after the starting (ignition) key is turned to driving position. One light is located in the instrument cluster and one in the console between the front seats. A chime will sound at the same time if the driver has not fastened his seat belt. The front and rear outboard seats are provided with self-retracting inertia-reel belts.

To buckle:

Pull the belt out from the retractor far enough to insert the latch plate into the buckle until a distinct snapping sound is heard. The belt should not be twisted or turned.

Note: The lap belt should sit low and tight under abdomen.

To unfasten, depress red push-button in buckle and let the belts rewind into their retractors.

Before exiting the car, check that the seat belt retracts fully after being unbuckled. If necessary, guide the belt back into its retractor slot.

The seat belt retractors are normally "unlocked",. The retractors will lock up as follows:

- if belt is pulled out rapidly
- during braking and acceleration
- if the vehicle is leaning excessively
- when driving in turns

Check seat belt mechanism function as follows:

1. Attach the seat belt. Pull rapidly on the strap.

2. **WARNING! Check other traffic before performing this check.**

Brake firmly from approximately 30 mph (50 km/h) or turn in a tight circle while pulling on the belt. In all the above checks you should not be able to pull the belt out.

### Seat belts, manually adjustable

The center rear seat belt is manually adjustable. It should always be adjusted to the correct length.

To lengthen, angle the buckle as shown in the upper illustration and pull the belt through.

To shorten, pull the upper part of the double webbing until snug.

### During pregnancy

Pregnant women should always wear seat belts. The lap belt should be located low on the hips, not pressing against the abdomen.

**WARNING: Never use any single seat belt for more than one occupant.**

**Never wear the shoulder portion of the belt under the arm or otherwise out of position. Such use could, in event of accident, cause injury.**

**Volvo recommends that all occupants fasten their seat belts. Aftermarket devices used to induce slack into the shoulder belt portion of Volvo's three-point belt system will have a detrimental effect on the amount of protection available to you in the event of a collision**

Note: Legislation in your state or province may mandate seat belt usage.

## Maintenance

Check periodically that the anchor bolts are secure and that the belts are in good condition.

Use water and a mild detergent for cleaning.

As the seat belts lose much of their strength when stretched, they should be replaced after collision, even though they may appear to be undamaged.

Never modify or repair the belt on your own. If repair is required, have the work performed by an authorized Volvo dealer.

pg. 30 Supplemental Restraint System (optional in Canada)

As an enhancement to the three-point seat belt system, your Volvo is equipped with a Supplemental Restraint System (SRS). The Volvo SRS consists of a drivers side air bag with a driver's side knee bolster. The system is designed to supplement the protection provided by the three-point seat belt system.

The interior of an SRS-equipped Volvo looks very much the same as any other. The only indications of the system's presence are the "SRS" embossed on the steering wheel pad, and the knee bolster beneath the steering column. Also, the SRS diagnostic receptacle is indicated on the center dash panel.

The air bag is folded and located in the center of the steering wheel. It is released only during a frontal or certain front-angular collision in which the forces sustained by the car are equivalent to an impact into a rigid barrier of approximately 12 mph (19 kph).

**WARNING!** As its name implies, SRS is designed to be a SUPPLEMENT to - not a replacement for - the three-point belt system. The air bag is not designed to be released in the event of a protection, wear seat belts at all times. Be aware that no system can prevent all possible injuries that may occur in an accident.

The air bag system includes a gas generator (1), surrounded by the air bag itself (2). In the event of a frontal or certain front-angular collision in which the forces sustained by the car are equivalent to an impact into a rigid barrier of approximately 12 mph (19 kph)), the sensor (3) activates the gas generator causing the air bag to be inflated with nitrogen gas. As the movement of the driver compresses the air bag, some of the gas is expelled at a controlled rate to provide better cushioning. The entire process, including inflation and deflation of the air bag takes approximately two-tenths of a second.

**WARNING:**

When installing any accessories make sure that the SRS system is not damaged. Do not attempt to service any component of the SRS yourself. Attempting to do so may result in serious personal injury. If a problem arises, take your car to the nearest authorized Volvo Dealer for inspection as soon as possible.

A self-diagnostic system incorporated in the sensor monitors the SRS. If a fault is detected, the "SRS" warning light will illuminate. The light is included in the warning/indicator light cluster in the instrument panel. Normally, the SRS warning light will be illuminated along with the other warning/indicator lights when the ignition key is turned to the ON position (position II), and go out a short time after the engine has been started. Check that this light is functioning properly every time the car is started.

The following items are monitored by the diagnostic system:

- Sensor unit electronics integrity.
- Reserve energy supply.
- Diagnostic output circuit.
- System voltage.
- Integrity of system connectors.
- Mercury switch closure.
- Gas generator ignitor

**WARNING! If the SRS warning light stays on after the engine has started or if it comes on while you are driving, drive the car to the nearest authorized Volvo Dealer for inspection as soon as possible.**

**ATTENTION! SRS VEHICLE!**

**THIS CAR IS EQUIPPED WITH A SUPPLEMENTAL RESTRAINT SYSTEM. TO PROVIDE CONTINUED RELIABILITY, CERTAIN ELEMENTS OF THE SUPPLEMENTAL RESTRAINT SYSTEM SHALL BE SERVICED OR REPLACED BY 1999. SEE OWNERS MANUAL FOR FURTHER INFORMATION.**

**VOLVO**

There is no maintenance to perform on the SRS yourself. The only periodic maintenance recommended on the SRS is that the air bag module and the sensor unit should be replaced every ten years and that the other components in the system (wiring, connectors, etc.) should also be inspected at this time. This service must be performed by an authorized Volvo dealer.

Should you have any questions about the SRS system, please contact your authorized Volvo Dealer or the Consumer Affairs Department:

[Contents](#) | [Top of Page](#)

### Unlocking front doors

Both front doors can be unlocked by using the starting (ignition) key. Turning the key 1/4 turn counter-clockwise (right door: clockwise) lifts the lock buttons on the window ledge and the door can be opened by pulling the handle.

To open a door from inside, the lock button must first be pulled up.

### Central lock

The vehicle is equipped with a central lock system. This means the lock on the driver's door automatically controls the locks on the other doors (including the trunk on Sedan models and the tailgate on the wagon model).

If the driver's door is locked or unlocked, the other doors will automatically be locked or unlocked.

### Locking doors

Both front doors can be locked by using the key. Turning the key 1/4 turn clockwise (left door) or counter-clockwise (right door) locks the door.

**NOTE:** The driver's door can only be locked using the key.

The lock buttons should not be in the down (locked) position during driving. In case of an accident, this may hinder rapid access to the occupants of the vehicle.

### Child safety locks

The buttons are located on the rear door jambs.

A The lock functions normally.

B The door cannot be opened from the inside.

**WARNING:** In the event of an accident, the rear seat passengers cannot open the doors from the inside with the buttons in position B.

Wagon model contains child safety lock on tailgate. The lock differs from that shown above. See section titled "Wagon, tailgate".

pg. 33 Trunk lid/light

*Classic Cars & Cycles*

[www.ClassicCycles.org](http://www.ClassicCycles.org)

Trunk lid

The trunk lock is incorporated in the central locking system. This means that you can either lock or unlock the trunk by means of the drivers door lock. You can also operate the trunk lock directly with the owner's key even if the vehicle is centrally locked.

Unlocking Locking

Withdraw key in vertical position

The trunk lock can also be disconnected from the central locking system by turning the key counterclockwise as shown below:

Withdraw key in horizontal position

The trunk is now always locked.

This option can be used if for example, you lend your car to somebody. If you give only the service key to the driver it will not be possible to open the trunk.

To reconnect the lock to the central locking system:

Withdraw key in vertical position

Trunk light

A Light always off.

B Light on when trunk lid is open.

pg. 34 Hood, Long load storage

To open the hood

[www.ClassicCycles.org](http://www.ClassicCycles.org)

Pull the release handle (located under the left side of the dash).  
Lift the hood slightly, insert a hand under the center line of the hood and depress the safety catch handle.  
Open the hood.  
Check that the hood locks properly when closing.

Long load storage (except wagon)

A flap in the rear seat makes it possible to carry "long loads" such as skis, etc.

**WARNING!**

When braking rapidly the load could be displaced and cause injury to occupants. Sharp edges on the load should be covered for protection. It is essential that the "load" be secured safely. Use belts locked around the folded down armrest (see illustration).

**WARNING!**

Do not place heavy objects on the rear window shelf. These objects can become dangerous projectiles in the event of sudden braking. Always secure large or heavy objects with the seat belts.

An optional, specially designed, storage bag should also be used to avoid soiling or tearing the upholstery. Please note that the flap in the rear seat is intended only for light loads such as skis, wood etc.

Max. length of load 6 1/2 ft = 2 m.  
Max. weight of load 33 lbs. = 15 kg.

**WARNING!**

Take care when loading/unloading the vehicle. Always turn off the engine and apply the parking brake. Place automatic transmission gear shift selector in position P (Park). This will prevent accidental movement of the gear shift selector to position D (Drive).

[Contents](#) | [Top of Page](#)

Rear view mirror

A Normal position

B Night position, reduces glare from following headlights

Side-view mirrors

A Adjustment up/down

B Adjustment sideways

Power mirrors

- A Adjustment up/down
- B Adjustment sideways

Avoid using ice scrapers made of metal as they can easily scratch the mirror surface.

**WARNING!**

The mirrors should always be adjusted before driving. Objects seen in the wide angle right side view mirror are closer than they appear to be.

pg. 36 Interior light, Sunroof, Refueling

Interior light

- 1 Light always on.
- 2 Light always off.
- 3 Light is on when either of the front or rear doors are opened.

The wagon model has a slightly different kind of interior lamp housing.

On certain models a time delay device illuminates the interior light for approx. 15 seconds after closing the driver's door. This facilitates finding starting (ignition) switch, etc., during darkness.

Sunroof (certain models)

The sunroof is operated by a handle located between the sun visors. Unfold the handle and turn it counter-clockwise to open, clockwise to close. For safety reasons, the handle should always be folded when driving.

# Refueling

The

*Classic Cars & Cycles*

*www.ClassicCycles.org*

- [42](#) Service inspection
- [42](#) Break-in period
- [43](#) Driving economy, shift indicator light
- [44](#) Starting the engine
- [45](#) Manual transmission
- [46](#) Automatic transmission
- [48](#) Emergency towing
- [49](#) Towing information
- [50](#) Trailer hauling
- [51](#) Automatic transmission, brake system
- [52](#) Catalytic converter

A new car should be broken-in!

Manual transmission

During the break-in period do not exceed the following speeds\*:

First 600 miles (1,000 km)

1st gear	20 mph	(30 km/h)
----------	-----------	-----------

2nd gear	30 mph	(50 km/h)
----------	-----------	-----------

3rd gear 50 mph (80 km/h)

4th gear 70 mph (110 km/h)

5th gear 80 mph (130 km/h)

600 - 1,200 miles (1,000 - 2,000 km)

1st gear 25 mph (40 km/h)

2nd gear 40 mph (65 km/h)

3rd gear 60 mph (100 km/h)

4th gear 80 mph (130 km/h)

5th gear 90 mph (150 km/h)

Avoid driving at low speed in high gear.

\* These are the maximum speeds recommended by the factory. Note that legislation in different countries and states can stipulate other max. speeds than those given here.

Automatic transmission

Do not depress the accelerator to the extent that "kick-down" is actuated during the first 1,200 miles (2,000 km) when driving a car equipped with an automatic transmission.

Breaking in parking brakes

To obtain best parking brake performance, the brake linings should be broken in. Stop 5-7 times from 30 mph (50 km/h), transmission in neutral, applying the parking brake with the release button pressed in during the stop. The force must not lock the rear wheels. If this happens, release the brake enough to let the wheels rotate. Drive a mile between each stop to cool the brakes. Check for proper parking brake operation.

Note: The brake lights are not illuminated when applying the parking brake. To warn traffic from behind it is therefore advisable to depress the brake pedal slightly to illuminate the brake lights.

600 - 1,200 mile maintenance service

To ensure proper operation the car should be taken to a Volvo dealer between the first 600 - 1,200 miles (1,000 - 2,000 km) for a maintenance service. The oil in the engine, manual transmission and rear axle will then be changed. This is very important since the oil rapidly collects impurities during the break-in period.

pg. 43 Driving economy, Shift indicator light

Economical driving does not necessarily mean driving slowly

Better driving economy may be obtained by thinking ahead, avoiding rapid starts and stops and adjusting the speed of your vehicle to immediate traffic conditions. Observe the following rules:

- Bring the engine to normal operating temperature as soon as possible by driving with a light foot on the accelerator pedal instead of allowing the engine to idle for a prolonged period. A cold engine uses more fuel and is subject to increased wear.
- When possible avoid using the car for driving short distances. This does not allow the engine to reach normal operating temperature.
- Drive carefully and avoid rapid acceleration and hard braking.
- Do not exceed speed limit.
- Avoid carrying unnecessary items (extra load) in the car.
- Check tire pressures regularly (cold tires).
- Remove snow tires when threat of snow or ice has ended.
- Note that roof racks, ski racks, etc., increase air resistance and thereby fuel consumption.

- Avoid using automatic transmission kick-down feature unless necessary.

Other factors which decrease gas mileage are:

- Worn or dirty spark plugs
- Incorrect spark plug gap
- Dirty air filter
- Incorrect valve clearance
- Incorrect idle speed
- Dirty engine oil and clogged oil filter
- Dragging brakes
- Incorrect front end alignment
- Low tire pressure

### Shift indicator light

(manual transmission models only)

The Volvo shift indicator light (S.I.L.) is a device designed to help you get even better gas mileage from your Volvo car. Studies have shown that the best fuel economy is obtained by shifting gears at low engine rpm and high relative engine load. The Volvo S.I.L. is calibrated to show you when to shift for improved mileage *without sacrificing smooth acceleration* .

Use of the S.I.L. is simple. Shift to next higher gear as soon as the light comes on. You may find after using the S.I.L. for some time that your natural shifting rhythm will adapt to the S.I.L.'s suggestion. Some drivers may even shift before the light comes on.

Obviously, there will be times when you need to shift later than the light would indicate (for example, when climbing hills or trailer towing). Using the light regularly, however, should result in a mileage improvement of six percent or more, depending on how you normally drive.

### Programming instructions for shift indicator

If the current supply to the control unit is cut (battery disconnected), the control unit will have to be re-programmed as the control unit memory will be erased.

Drive the car in each gear (first gear not necessary) for approximately 8 seconds.

The gear change indicator light will flicker once (0.5 seconds), as each gear is programmed.

*Classic Cars & Cycles*

*www.ClassicCycles.org*

Note: Remove foot completely from the clutch pedal after each gear change when programming the control unit.

pg. 44 Starting the engine

To start the engine;

- 1 Enter the car and check that the seat is adjusted properly. Make sure that the brake (and clutch) pedal can be depressed completely. Move the seat closer if necessary.
- 2 Fasten the seat belt.
- 3 Apply the parking brake if not already set. Depress the brake pedal with your right foot.
- 4 Place the gear selector lever in neutral (position N or P, automatic transmission).
- 5 Depress the clutch pedal (manual transmission).
- 6 Without touching the accelerator pedal turn the ignition key to starting position. Release the key as soon as the engine starts.

Avoid repeated short attempts to start (fuel is injected every time the starter is engaged when engine is cold).

Allow the starter to operate for a longer time (but not more than 15-20 seconds).

Do not race a cold engine immediately starting.

Engine warm-up-initial driving procedure

Experience shows that engines in vehicles driven short distances are subject to abnormally rapid wear because the engine never reaches normal operating temperature.

It is therefore beneficial to reach normal operating temperature as soon as possible by driving with a light foot on the accelerator pedal.

**Warning: Always open the garage doors fully before starting the engine inside the garage to ensure adequate ventilation. The exhaust gases contain carbon monoxide, which is invisible and odorless but very poisonous.**

[Contents](#) | [Top of Page](#)

*Classic Cars & Cycles*

*www.ClassicCycles.org*

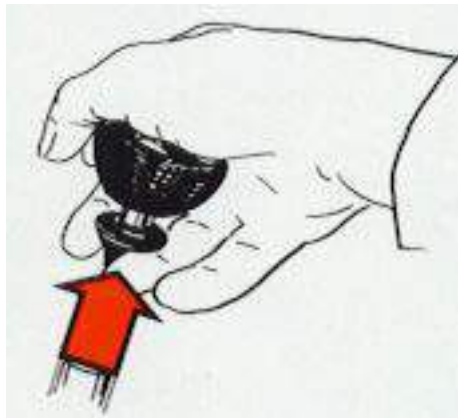

### 5-speed manual transmission

Depress the clutch pedal fully when changing gears.

Remove the foot from the clutch pedal after every gear shift.

See "Shift indicator light" section for more information on economical use of the manual transmission.

Recommended minimum and maximum speeds for each gear are listed in the specification section.

### Reverse gear (R)

The detent collar on the gear shift lever must be lifted prior to engaging reverse gear. This prevents inadvertent selection of reverse gear.

## Shift positions

P park D drive  
 R reverse 2 intermediate  
 N neutral 1 low

The gear selector can be moved freely between D and 2. Selections of other positions are obtained by depressing the selector knob prior to moving the selector.

Depressing the selector knob slightly allows selection of positions N and 1 .

Depressing the selector knob fully allows selection of positions R and P . This is also necessary when initially bringing the selector out of position P .

Depressing the selector knob fully thus permits shifting freely between all positions.

### P Park

Use this position when parked with the engine running or stopped.

Never use P while car is in motion.

The transmission is mechanically locked in position P. Also use the parking brake when parking on grades for added safety.

### R Reverse

Never use R while car is moving forward.

### N Neutral

Neutral position = no gear is engaged. Use parking brake.

## D Drive

D is the normal driving position. Upshift and downshift of the forward gears occurs automatically and is governed by acceleration and vehicle speed.

## 2 Intermediate position

Upshift and downshift of first two gears (low and intermediate) occurs automatically.

No upshift to 3rd (top) gear occurs.

Position 2 may be used to obtain forced downshift to 2nd gear for increased engine braking effect.

Position 2 can also be used...

- for relatively slow highway driving.
- for city driving.
- when driving on mountain roads where precise speed control is desirable.
- for passing.

## 1 Low position

If position 1 is selected when driving at high speeds, 2 is engaged first and 1 when the speed has dropped to approx. 30 mph (50 km/h).

NOTE: No upshift once 1 is engaged.

Use position 1 to select low gear with no upshift. Use for instance, when ascending and descending steep grades.

## CAUTION:

- Never select P or R while the car is in motion.
  - When initially selecting D, 2, 1 or R, your right foot should press firmly on the brake and the engine must be idling.
  - Never downshift to 2 or 1 at speeds above 75 mph (125 km/h)\*.
- \*Always observe local speed limits!

Button on gear selector knob and indicator light symbol.

## Disengaging 4th gear

The transmission will engage 4th gear automatically after upshifting through first, second and third gears unless the disengagement button on the side of the gear knob is pushed.

When the button is pushed to disengage 4th gear, the transmission operates as a 3-speed unit. If the button is pushed while 4th gear is engaged, then a downshift to 3rd gear will occur. The transmission, then, cannot upshift to 4th gear until the button is pushed again. As a reminder, when 4th gear is disengaged, the indicator light (☛) in the instrument panel is illuminated.

Be aware that, if 4th gear is disengaged (reminder light illuminated) when the engine is switched off, the transmission will revert automatically to 4-speed operation (reminder light not illuminated) when the engine is restarted.

Disengage 4th gear (reminder light illuminated) when:

- \* towing a trailer
- \* driving on hilly roads where precise speed control is desired.

## Kick-down

Automatic down-shift to a lower gear is achieved by depressing the throttle pedal fully and briskly. An up-shift will be achieved when approaching the top speed for a particular gear or by releasing the throttle pedal slightly.

Kick-down can be used for maximum acceleration or when passing at highway speeds.

Starting and stopping a car equipped with automatic transmission

1. Enter the car and check that the seat is adjusted properly. Make sure that the brake pedal can be depressed completely. Move the seat closer if necessary.
2. Fasten the seat belt.
3. Apply the parking brake if not already set. Depress the brake pedal with your right foot.
4. Place the gear selector in Park (or neutral).
5. Without touching the accelerator pedal, turn the ignition key to the starting position. Release the key as soon as the engine starts.
6. Select the desired gear. There is a slight delay before the gear engages which is most notable when selecting Reverse. Do not accelerate until you have felt the gear engage!

Note: Too-rapid acceleration immediately after selecting a gear will cause harsh engagement and premature transmission wear.

7. Release parking brake, then foot brake, and accelerate. To stop the car release the accelerator and apply the brakes with your right foot.

It is not necessary to move the gear selector as the transmission will downshift automatically. When idling for extended periods of time, select position N to prevent unnecessary heating of the transmission.

**WARNING! Always place gear selector in Park and apply parking brake before leaving vehicle. Never leave car unattended with engine running.**

pg. 48 Emergency towing (pulling)

Front eyelet

Rear eyelet

## Precautionary steps to observe when towing

Please check with state and local authorities before attempting this type of towing as vehicles being towed are subject to regulations regarding maximum towing speed, length and type of towing device, lighting, etc.

- Steering must be unlocked.
- Remember that power brake and power steering assists will not be available when engine is inoperative. Pedal pressure required is 3 - 4 times above normal and greater steering effort must be employed.
- Towing cars equipped with automatic transmission:
  - Gear selector in position N. Check transmission oil level (see section titled "Transmission oil").
  - Maximum speed: 20 mph (30 km/h).
  - Maximum distance with rear wheels on ground: 20 miles (30 km).

### CAUTION!

Do not attempt to start the car by pushing or pulling as damage to catalytic converter can result.

Jump starting, see section titled "alternator, jump starting".

### NOTE:

Refer to the section regarding "On-Call"

pg. 49 Tow-truck information

Only use wheel lift or flat bed equipment.

### CAUTION:

Sling-type equipment applied at the front will damage radiator and air conditioning lines. It is equally important not to use sling-type equipment at the rear or apply lifting equipment inside the rear wheels; serious damage to the rear axle may result.

[Contents](#) | [Top of Page](#)

When preparing for trailer hauling, observe the following:

- Use a trailer hitch which meets Federal Safety Standards for rear end collisions (FMVSS 301 -75). For trailer weights exceeding 2,000 lbs (908 kgs) use only a trailer hitch offered as a Genuine Volvo Accessory.
- Maximum trailer weight recommended by Volvo is 3,300 lbs (1,500 kg). However, for cars with automatic transmission, an optional Volvo automatic transmission oil cooler must be installed when trailer weight exceeds 2,000 lbs (908 kgs). With manual transmission, 5th gear should not be used while towing. Observe legal requirements of the state in which the vehicles are registered.

All Volvo models are equipped with energy absorbing shock mounted bumpers. Trailer hitch installation should not interfere with the proper operation of the bumper system.

**WARNING! Bumper-attached trailer hitches must not be used on Volvo's, nor should safety chains be attached to the bumper.**

**Trailer hitches attaching to the vehicle rear axle must not be used.**

**WARNING! Never connect a trailer's hydraulic-brake system directly to the vehicle brake system, nor a trailer's lighting system directly to the vehicle lighting system. Consult your nearest authorized Volvo dealer for correct installation.**

Trailer hauling does not normally present any particular problems, but take into consideration:

- Recommended hitch tongue load is 110 lbs (50 kgs) for trailer weights below 2,650 lbs (1,200 kgs) and 143-154 lbs (65-70 kgs) for trailer weights above 2,650 lbs (1,200 kgs). However, it must not exceed 200 lbs (90 kgs).
- For trailer weights between 2,650-3,300 lbs (1,200-1,500 kgs) a top speed of 50 mph (80 km/h) should never be exceeded.
- Engine and transmission are subject to increased loads. Therefore, engine coolant temperature should be closely watched when driving in hot climate or hilly terrain. Use lower gear and turn off air conditioner if temperature gauge pointer enters the red range.
- Avoid overload and other abusive operation.
- Hauling a trailer affects handling, durability and economy.

*Classic Cars & Cycles*

*www.ClassicCycles.org*

- It is necessary to balance trailer brakes with the towing vehicle brakes to provide a safe stop (check and observe State regulations).
- More frequent vehicle maintenance is required.
- Remove the ball and drawbar assembly when the hitch is not being used.
- Increase tire pressure to recommended full-load pressure. See section "Wheels and Tires."

Note: Refer to section entitled "Automatic transmission" for additional trailer hauling tips.

Warning: Do not drive with trunk lid or tailgate open!

Poisonous exhaust gases may enter via the open trunk lid or tailgate. (This is especially true for wagon models.)

If the trunk lid or tailgate for any reason must be open, proceed as follows:

- Close the windows.
- Set the heating system controls for floor and defroster to max. and the blower to full speed (4). See section titled "Heating and Ventilation".

## Handling, roadholding

Vehicle load, tire design and inflation pressure are important for proper handling. Therefore check that the tires are inflated to the recommended pressure according to the vehicle load.

Loads should be distributed so that capacity weight or maximum permissible axle loads are not exceeded.

It is recommended to use tires of the same make and dimensions on all four wheels.

Warning: Do not mix radial ply and bias ply tires as this will adversely alter the vehicle handling characteristics.

## Roof rack

Permanent and removable roof racks are available from Volvo Accessories.

- Observe the following points when in use.
- Avoid point loads. Distribute the load evenly.
- Place the heavy cargo at bottom of load.
- Observe that center of gravity and handling are influenced by the load weight.
- Increasing load size increases wind resistance.
- Anchor the cargo correctly with a cord.
- Drive carefully. Avoid rapid starts, heavy cornering and heavy braking.
- Max. roof load is 220 lbs (100 kg); use a roof rack with a sufficient load rating.

pg. 51 Automatic transmission, Brake system

The following "Special Tips" apply to cars with automatic transmission

- For steep hills and when driving for prolonged periods at low speeds, position 1 should be selected. Avoid, however, repeated changes since this can cause overheating of the transmission oil. For driving on mountain roads with long persistent uphill gradients, select position 2.
- When negotiating long, steep, downhill slopes, position 1 should be selected and position 2 for less severe inclines, in order to obtain the best possible engine braking effect. Do not hold the car stationary on an incline by using the accelerator pedal. Instead, engage the hand brake. This prevents the transmission oil from becoming overheated.
- 4th gear must be disengaged when hauling a trailer!
- If an additional transmission oil cooler is installed you can haul a trailer with the overdrive engaged. See next "special tip".
- When driving with heavy trailers, it is recommended that an additional oil cooler be installed. This applies especially when driving under severe conditions e.g. mountain driving or prolonged driving at high speeds without breaks. The additional oil cooler is available as a genuine Volvo accessory. Regarding oil change, see section titled "Transmission oil".

Moisture on brake discs and brake pads affects braking.

Driving in rain and slush or passing through a normal car wash can cause water to collect on the brake discs and pads. This will cause a delay in braking effect when the pedal is depressed. To avoid such a delay, when the brakes are needed, depress the pedal occasionally when driving in rain or slush.

This will remove the water from the brakes.

This should also be done after washing or starting in very damp weather.

If the brake power assist does not function --

The power assist to the brakes functions only when the engine is running. When the car is moving without the engine running the brake pedal pressure required to stop the car is increased 3- 4 times. The brake pedal feels stiff and hard.

Disc brake noise: A slight-to-moderate amount of disc brake "squeal" is considered normal.

Air dam (front spoiler)

A non-factory air dam can negatively influence the normal flow of cooling air to the front wheel brakes. (See section titled "Wheels and Tires").

If one of the brake circuits should malfunction the red warning light will come on

(See section titled "Warning Lights".)

The pedal stroke increases slightly and the pedal feels softer but the pedal pressure required does not increase noticeably.

If the light comes on while driving and the brake pedal can be depressed further than normal, it is an indication that one of the brake circuits is not functioning. Stop immediately, open engine hood and check brake fluid level.

Reservoir empty: do NOT drive. Tow car to shop for check/repair of brake system. Reservoir not empty: proceed immediately and with caution to a Volvo dealer for an inspection of the brake system.

Severe strain on the brake system

The brakes will be subject to severe strain when driving in mountains or hilly areas. The speed is usually low which means that the cooling of the brake is less efficient than when driving on level roads.

To reduce the strain on the brakes it is advisable not to use the brakes excessively.

Instead, shift into a lower gear and let the engine help with the braking. A good rule is to use the same gear downhill as would be used ascending the same grade. For vehicles with automatic transmission use position 2, or in some cases, 1.

## Catalytic Converter Cautions

- Keep your engine properly tuned. Certain engine malfunctions, particularly involving the electrical, fuel or ignition systems, may cause unusually high converter temperatures. Do not continue to operate your vehicle if you detect engine misfire, noticeable loss of power or other unusual operating conditions, such as engine overheating or backfiring. A properly-tuned engine will help in avoiding malfunctions that could damage the Catalytic Converter.
- Remember that tampering with or unauthorized modifications to the engine or the vehicle may be illegal and can cause catalyst or exhaust system overheating. This includes:
  - Altering fuel injection settings or components.
  - Adjusting ignition timing beyond specified limits.
  - Altering emission system components or location or removing components.
  - Use of leaded fuel.

**WARNING:** Do not park your car over combustible materials, such as grass or leaves, which can come into contact with the hot exhaust system and cause such materials to ignite under certain wind and weather conditions.

*Classic Cars & Cycles*

- Excessive starter cranking (in excess of one continuous minute) with an intermittently firing or flooded engine, can cause catalyst or exhaust system overheating. This also applies to lengthy pushing or towing of vehicle to start (manual transmissions only). Do not attempt to start a car with automatic

transmission by pushing or towing .

**CAUTION:** Unleaded fuel is required for cars with catalytic converter. A label on the instrument panel and rear fender, near the filler inlet, will remind owners and filling station attendants of this requirement.

**Important!** It is unlawful to dispense leaded fuel into any vehicle labeled "unleaded gasoline only".

## MAINTENANCE

### Maintenance services

Your Volvo has passed two major inspections before it was delivered to you, according to Volvo specifications. When driven 600 - 1,200 miles (1,000 - 2,000 km), your car should be brought to the Volvo dealer for a maintenance service. Engine, manual transmission and rear axle oils, will be changed at this time.

Following this inspection, maintenance Inspections as outlined In this book should be performed every 5,000 miles (8,000 km). Engine oil and oil filter changes should be performed every 5,000 miles (8,000) km, or at the time intervals outlined on page 62.

The extended maintenance inspection intervals make it even more advisable to follow this program.

Inspection and service should also be performed any time a malfunction is observed or suspected.

It is recommended that receipts for vehicle emission services be retained in the event questions arise concerning maintenance. See your "Warranty Information and Maintenance Records Booklets".

### Maintenance Inspection Intervals

Volvo advises you to follow the inspection program at 5,000 mile or 8,000 km intervals which is outlined in the "Warranties and Maintenance Records Manual: This maintenance program contains inspections and services necessary for the proper functioning of your car over the next inspection interval. The maintenance inspections contain several checks which require special instruments and tools and therefore must be performed by a qualified technician.

To keep your Volvo in top condition, specify time tested and proven Genuine Volvo Parts and Accessories.

## THE FEDERAL CLEAN AIR ACT (USA)

The Clean Air Act requires vehicle manufacturers to furnish written instructions to the ultimate purchaser to assure the proper functioning of those components that control emissions.

The maintenance instructions listed in the "Servicing" section of this Manual represent the minimum maintenance required. These services are not covered by the warranty. You will be required to pay for labor and material used. Refer to your "Warranties and Maintenance Records Manual" for further details.

In accordance with Federal Regulations, your Volvo is warranted to meet certain Emission Performance Standards. Refer to your Warranty Information Manual for detailed information concerning:

- Emissions Performance Warranty (USA)
- Limited 5-Year/50,000-Mile Emission System Warranty (USA)
- 5-Year/80,000-Kilometer Emission System Warranty (Canada)

pg. 56 Servicing

## MAINTENANCE SCHEDULE

A = Adjust (Correct if necessary)

R = Replace

I = Inspect (Correct or Replace if necessary)

L = Lubricate

Maintenance operation Miles (km)	600-1,200 (1,000-2,000)	5,000 (8,000)	10,000 (16,000)	15,000 (24,000)	20,000 (32,000)	25,000 (40,000)	30,000 (48,000)	35,000 (56,000)	40,000 (64,000)	45,000 (72,000)	50,000 (80,000)	55,000 (88,000)	60,000 (96,000)

- 7 Battery
- 8 Oil reservoir, power steering
- 9 Fuse, engine control

pg. 60 Fuel requirements

## Unleaded Fuel

Each Volvo has a catalytic converter and must use only unleaded gasoline (as specified on the instrument panel and by a label near the filter inlet). U.S. and Canadian regulations require that pumps delivering unleaded gasoline be labeled "UNLEADED". Only these pumps have nozzles which fit your car's filler inlet. It is unlawful to dispense leaded fuel into a vehicle labelled "unleaded gasoline only".

Leaded gasoline damages the catalytic converter and the oxygen sensor system. Repeated use of leaded gasoline will lessen the effectiveness of the emission control system and could result in loss of emission warranty coverage. State and local vehicle inspection programs will make detection of misfueling easier, possibly resulting in emission test failure for misfueled vehicles.

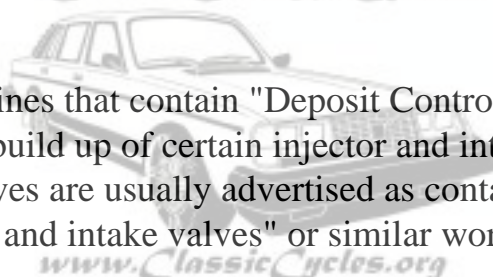

## Octane Rating

Volvo recommends the use of premium unleaded gasoline with an (R+M)/2 rating of 91. This is generally equivalent to a Research Octane Number (RON) of 95 or higher.

## Deposit Control Gasolines

Volvo recommends the use of gasolines that contain "Deposit Control" additives. These additives are specially formulated to prevent the build up of certain injector and intake system deposits. Fuels containing "Deposit Control" additives are usually advertised as containing them and may have additional claims to "clean injectors and intake valves" or similar wording.

*Classic Cars & Cycles*

[www.ClassicCycles.org](http://www.ClassicCycles.org)

If it is not clear whether the fuel contains such additives, ask the station operator for further information regarding the detergency of their gasolines.

## Gasoline Containing Alcohol

Some fuel suppliers sell gasoline containing alcohol without advertising the presence of alcohol. If you are not sure whether there is alcohol in the gasoline you buy, check with the service station operator.

Blends of unleaded gasoline and ethanol (ethyl alcohol, grain alcohol), sometimes called "gasohol", are available in some areas. Gasohol, if used, must contain no more than 10 percent ethanol and must have an (R+M)/2 rating of 87 or higher. If you experience problems with starting, drive ability, or fuel economy with gasohol, you should discontinue its use.

Take care not to spill gasoline during refueling. Gasolines containing alcohol can cause damage to painted surfaces, which may not be covered under the New Vehicle Limited Warranty.

### Caution:

Do not use gasolines containing methanol (methyl alcohol, wood alcohol). This practice can result in vehicle performance deterioration and can damage critical parts in the fuel system. Such damage may not be covered under the New Vehicle Warranty.

## Fuel Tank

The fuel tank is designed to hold approx. 15.8 US gal. (60 liters), with sufficient volume left over to accommodate possible expansion of the fuel in hot weather.

Be aware that the "usable" tank capacity will be somewhat less than the 15.8-US gal. (60-liter) maximum. When the fuel level is low, such factors as ambient temperature, the fuel's "vapor pressure" characteristics, and terrain can affect the fuel pumps' ability to supply the engine with an adequate supply of fuel. Therefore, it is advisable to refuel as soon as possible when the needle nears the red zone. After the needle enters the red zone, you should be able to drive approx. 25 miles (40 km) depending on driving style and conditions.

## Checking oil level

The oil level should be checked each time the fuel tank is refilled. Be sure the oil level is maintained between the upper and lower marks on the dipstick. Low oil level can cause internal damage to the engine and overfilling can result in high oil consumption. The distance between the dipstick marks represents approx. 1 quart (1 liter) of oil.

## Changing oil filter

Replace the oil filter at every oil change. If the oil filter is changed separately, 1/2 US qt = 1/2 liter of oil should be added.

## To add oil or change oil

Add oil of the same kind as already used. See engine oil section.

Note: Allow engine to cool before changing oil.

## Coolant

Maintain fluid level between MAX and MIN marks on expansion tank. Mixture of 50 percent Volvo antifreeze type C (blue-green) or similar and 50 percent water should be used. See "Coolant" section.

## Brake fluid

Without removing the cap, check that the level is above the MIN mark. Brake fluid DOT 4. See "Brake fluid" section.

## Battery

Check level in conjunction with normal service or once a year. Electrolyte level 1/4" - 3/8" (5-10 mm) above plates. Use distilled water. Never add acid.

**Warning:**  
Battery gases are explosive if brought in contact with open flame or sparks.

Washer fluid

Coolant reservoir

## Washer fluid

Washer fluid reservoir. Water and solvent (in wintertime, use windshield washer anti-freeze). See "Washer fluid reservoir" section.

## Oil quality

According to API SG or alternatively API SF.

- Oils with designations SO/CD, SF/CC and SF/CD comply with these requirements.

Viscosity (stable ambient temperatures):

Volvo recommends the use of energy-conserving oils. Look for the API label. Synthetic or semisynthetic oils may be used if their specifications comply with the oil quality requirements. Volvo does not recommend oil additives, as they can adversely affect the engine.

## Changing oil and oil filter

Oil and oil filter are first changed at the 600-1,200 mile (1,000-2,000 km) service. Thereafter, changes should be made as specified by this table:

## Capacity

Including oil filter: 4.0 US qts = 3.85 litres

Check oil level when filling fuel.

SAE 15W/40 is recommended for use in driving conditions that raise oil temperature and increase oil consumption (i.e., mountain driving, trailer towing).

Note: SAE 15W/40 must not be used at low ambient temperatures; see viscosity chart.

Volvo recommends the use of oils with the American Petroleum Institute (API) label. This label certifies that the oil conforms to the applicable standards and specifications of the API.

If driving conditions include:	Then the correct oil/oil filter change interval is:
<ul style="list-style-type: none"><li>• Extended periods of idling and/or low-speed operation</li><li>• Frequent short trips (less than 7 miles = 11 km)</li><li>• Extended periods of driving in dusty and/or sandy areas</li><li>• Trailer towing</li><li>• Driving in mountainous areas</li></ul>	<b>EVERY 3 MONTHS</b> or 5,000 miles = 8,000 km <b>WHICHEVER COMES FIRST</b>
<ul style="list-style-type: none"><li>• Primarily highway driving</li><li>• Frequent trips of longer than 7 miles = 11 km</li></ul>	<b>EVERY 6 MONTHS</b> or 5,000 miles = 8,000 km <b>WHICHEVER COMES FIRST</b>

## Changing coolant

Every two years or 30,000 miles (48,000 km) the cooling system should be drained, flushed and refilled. Remove the expansion tank cap. Open the drain cock on right side of the engine block and disconnect the lower radiator hose.

Fill coolant through the expansion tank.

The heater controls should be fully open when draining and filling.  
Add coolant until the level is up to the MAX mark or slightly above.

Start engine and run until hot. Check the cooling system connections for tightness. Also re-check the coolant level. Capacity: 9.9 US qts. = 9.4 liters (manual transmission models); 9.7 US qts = 9.2 liters (automatic transmission models)

Cooling system, hoses and connections

Check all cooling system hoses and connections for defects or deterioration of hoses and loose clamps or fittings.

### Drive belts

The belt tension can be checked by depressing the fan belt at a point midway between the alternator and fan pulleys as illustrated. It should be possible to press down the belt about 1/4" - 3/8" (5-10 mm). This also applies to other drive belts on the engine.

If drive belts are replaced, recheck belt tension after driving 600 - 1,200 miles (1,000 - 2,000 km).

[Contents](#) | [Top of Page](#)

## Engine Mechanical Components

### Torque manifold nuts

The manifold nuts should be torqued at the 600-1,200 mile (1,000-2,000 km) inspection. A loose manifold could alter air/fuel ratio and cause an increase in emission and/or poor driveability.

### Valves

The valve clearance should be checked every 30,000 miles (48,000 km).

### Vacuum fittings, hoses and connections

Unstable idle, misfiring or poor emission control is often caused by leaking vacuum hoses or connections. Check hoses and connections on distributor vacuum unit, EGR valve (where applicable) and connections on heater control servo systems and hydraulic brake servo.

### Exhaust Gas Recirculation (EGR)

This system operates by returning some of the exhaust gases to the engine to be recombusted: since this lowers the combustion temperature the amount of nitrogen oxides released into the atmosphere is reduced.

The EGR valve should be cleaned at the 60,000 mile inspection and thereafter cleaned every 25,000 miles (40,000 km).

### Timing belt

The timing belt tensioner should be adjusted at the 600-1,200 mile (1,000-2,000 km) inspection.

## Engine Fuel System

The fuel injection system is all-electronic and is microprocessor controlled. It can continually compensate for variations in engine load, speed and temperature to give the best economy and power. The most unique feature of the system is the air mass meter which measures the mass of the inducted air instead of the volume. In this way the system can make instantaneous adjustments for changes in air temperature or density, thus always assuring the best economy with the lowest possible exhaust emissions.

## Special Instructions for work on the fuel injection system

Extreme cleanliness is essential when working on the injection system. Great care must be observed. Injection system service should be handled by qualified technicians, using equipment intended for this service.

## Fuel (line) filter

We recommend that this filter be changed every 60,000 miles (96,000 km). The filter is replaced as one

complete unit.

Replace more frequently if contaminated fuel was introduced into the tank.

### Fuel system cap, tank, lines and connections

The ability of the fuel system to control hydrocarbon emissions is dependent largely on a leak-free system. Check for proper sealing of gasoline filler cap which contains "O"-ring type seals. Check all evaporative hoses in vehicle for tightness. Check fuel lines under vehicle. Repair if necessary.

### Air cleaner

Replace the air cleaner cartridge every 30,000 miles (48,000 km). The cartridge should be replaced more often when driving under dirty and/or dusty conditions.

The filter cannot be cleaned and should always be replaced with a new one.

### Checking and adjusting idle speed

Your Volvo is equipped with an electronically controlled idle speed system that requires no period checking or adjustment.

### Lamda-sond (oxygen sensor) system

This is an emission control system designed to reduce emissions and improve fuel economy. An oxygen sensor monitors the composition of the exhaust gases leaving the engine. The exhaust gas analysis is fed into an electronic unit which continuously influences the amount of fuel injected. This adjusts the air-fuel ratio to provide optimum conditions for combustion and efficient reduction of the three major pollutants (hydrocarbons, carbon monoxide and nitrogen oxides) through a 3-way catalytic converter.

## Oxygen Sensor

On the B230F engines, the oxygen sensor (Lambda-sond) is electrically heated. The use of a PTC (Positive Temperature Coefficient) element to heat the Lambda-sond ensures a shorter warm up time and continuous operation at its working temperature.

This type of Lambda-sond does not require periodic replacement.

## Catalytic Converter

This is a supplementary device in the exhaust system, designed to reduce exhaust emissions.

This device is mainly a container with a ceramic material insert, designed to let the exhaust gases pass through channels in the insert. The channel walls are covered by a thin layer of platinum and rhodium. These metals act as catalysts, permitting a chemical action to occur without actually taking part in it. The carbon monoxide content will increase if the Catalytic Converter is damaged.

### CAUTION:

Vehicles with Catalytic Converter must use unleaded fuel only. Otherwise the Catalytic Converter will become damaged and ineffective.

## Torque catalytic converter mounting bolts

The Catalytic Converter mounting bolts should be re-torqued at the 600-1,200 mile (1000-2000) km inspection.

## Crankcase ventilation

The engine is provided with positive crankcase ventilation (PCV) which prevents crankcase gases from being released into the atmosphere. Instead, the crankcase gases are admitted to the intake manifold and cylinders.

- B230F
1. PCV nipple
  2. Flame Guard
  3. Oil trap

## PCV system, B230F engine

The PCV nipple in the intake manifold should be cleaned after 60,000 miles (96,000 km).

pg. 69 Servicing

## Engine Evaporative Emissions

## Evaporative control systems

Vehicles intended for the North American market are equipped with a fuel vapor evaporative control system, which prevents gasoline fumes from being released into the atmosphere.

The system is comprised of an expansion chamber in the fuel tank, a roll-over valve on the cross member in front of the fuel tank, and a charcoal canister with built-in vacuum valve. The components are interconnected by hoses which channel fuel vapor from the gas tank to the charcoal filter where they are stored until the engine is started and then drawn into the engine fuel induction system.

## Engine Ignition

### Change spark plugs

The spark plugs should be changed every 30,000 miles (48,000 km).

However, prolonged city driving or fast highway driving may necessitate changing spark plugs after 10,000 miles (16,000 km) of driving. When installing new plugs, be sure to fit the right type and use the correct torque, see "Specifications".

When changing the spark plugs, check that the suppressor connectors are in good condition. Cracked or damaged connectors should be replaced.

When changing spark plugs, clean the cables and cable terminals, also the rubber seals. If the car is driven on roads where salt is used during the winter, coat the cables with silicone.

## WARNING!

The ignition system operates at very high voltages. Special safety precautions must be followed to prevent injury:

Always turn the ignition off when:

- connecting engine test and diagnostic equipment to the vehicle (timing light, tach-dwell tester, ignition oscilloscope, etc.).
- Replacing ignition components e.g. plugs, coil, distributor, high-tension leads, etc.

[Contents](#) | [Top of Page](#)

*Classic Cars & Cycles*

*www.ClassicCycles.org*

Manual transmission with overdrive, M47 II

Capacity: 1.6 US qts 1.5 liters.

Fluid type: Automatic Transmission Fluid Type F

Replace: at 600-1,200 mile (1,000-2,000 km) service only.

The oil level should be up to the level/filler plug.

When replacing transmission oil, drain the oil immediately after driving, while it is still hot, by removing the drain plug.

**Warning: Use care to prevent possible burning from hot transmission oil.**

## Automatic transmission

Capacity: 7.8 US qts (7.4 liters)

Fluid type: Automatic Transmission Fluid type Dexron II D.

Replace: every 20,000 miles (32,000 km).

A Cold transmission: oil temperature = + 105°F ( + 40°C) .

This is a normal temperature for the transmission after idling for about 10 minutes.

At oil temperature below +105°F (+40°C), the level may be below the MIN mark.

B Warm transmission: oil temperature = + 195°F ( + 90°C) .

This temperature is obtained when driving for about 30 minutes.

At oil temperature above + 195°F ( + 90°C), the level may be above the MAX mark.

### Note!

The engine should be idling when checking transmission fluid level.

Check the oil level as follows:

Park the car on level surface with the engine idling.

Slowly move the selector lever through all the gear positions and then to position P. Wait 2 minutes before checking the oil level. As the illustration shows, the dipstick has a "Cold" and a "warm" side.

The oil level should be between the MIN and MAX marks.

Wipe the dipstick with a clean cloth.

**WARNING! The oil may be very hot!**

Do not use rags which can leave lint on the dipstick.

The transmission is topped up via the dipstick tube.

The space between the MIN and MAX marks on the dipstick corresponds to 0.5 US qts (0.5 liter). Do not fill the transmission with too much oil, since this can result in oil being ejected from the transmission.

Too little oil, on the other hand, can negatively affect transmission operation, particularly in very cold weather.

pg. 72 Rear axle oil, Power steering fluid, Brake fluid

Rear axle oil

Capacity: 1030 1.4 US qts 1.3 liters

1031 1.7 US qts 1.6 liters

Oil type: API GL-5 (MIL-L-2105 B or C) or Volvo Rear Axle Oil 1161329

Viscosity: SAE 90 or 80W / 90

Replace: at 600 - 1,200 mile (1,000 - 2,000 km) service only

The oil level should be up to the filler plug (A).

Drain rear axle oil through drain plug (B).

When the temperature is consistently below 15°F (-10°C), use API GL-5 SAE 80/90W oil.

Cars equipped with limited slip differentials should use oils with proper additives.

### Power steering fluid

Capacity: 0.8 US qts = 0.75 liters  
Fluid type: ATF  
Replace: no fluid change required.

The dipstick is attached to the cap. Fluid level should be between MIN and MAX marks. Add fluid when the level is at the ADD mark.

### Brake fluid

Fluid type: DOT 4

Replace: every 2 years or 30,000 miles (48,000 km).

Check, without removing the cap, that the level is above the "MIN" mark of the fluid reservoir.

Always entrust brake fluid changing to a Volvo dealer.

Change brake fluid every year when driving under extremely hard conditions (mountain driving etc.) and if the car is equipped with a non factory air dam.

pg. 73 Body Lubrication

### Chassis maintenance

To simplify maintenance, your Volvo has been equipped with ball joints steering rods and propeller shafts that do not require regular lubrication. Points that normally require lubricating have been packed with very durable grease at the factory and then carefully sealed, eliminating the need for subsequent lubrication.

### Lubricate body

To avoid rattles and unnecessary wear, the body should be lubricated once a year. Hinges on hood, doors and trunk lid as well as door stops should be lubricated every 10,000 miles (16,000 km).

Door hinges (lower) and door stop

A grease B oil

No. Lubricating point Lubricant

1 Trunk lid lock keyhole Low temperature grease

2 Trunk lid hinges Oil

3 Door lock keyhole

and latch devices Oil

8 Window regulator Oil, grease

Locking device Silicon grease

(Accessible after door  
upholstery panels  
removed)

9 Door hinges Grease

Door stop Oil

pg. 74 Cooling system

*Classic Cars & Cycles*

*www.ClassicCycles.org*

### Check coolant level

The cooling system must be filled with coolant and not leak to operate at maximum efficiency. Check the coolant level whenever you refuel. The level should be between the "Max" and "Min" marks on the expansion tank. The check should be made with particular thoroughness when the engine is new or the cooling system has been drained.

Do not remove the filler cap other than for topping up with coolant. Frequent removal may prevent coolant circulation between the engine and the expansion tank during engine warm up and cooling.

#### CAUTION

The cooling system must always be kept filled to the correct level.

If it is not kept filled, there can be high local temperatures in the engine which could result in damage.

### Top up with coolant

Top up with coolant by filling the expansion tank when level is at the "Min" mark. Use a mixture of 50 percent Volvo Type C coolant and 50 percent water all the year round. Top up to the "Max" mark. If the engine is warm, and you are going to add coolant, unscrew the cap slowly in order to allow any excess pressure to escape.

Note: Do not add water only. Water by itself reduces the rust protective and anti-freeze qualities of the coolant and has a lower boiling point. It can also cause damage to the cooling system if it should freeze.

See 'Specifications' section of the manual for type of coolant recommended.

## Cooling system

The risk of overheating is greatest, especially in hot weather, when:

- towing a trailer up steep inclines for prolonged periods at full throttle, and at low engine rpm.
- idling for prolonged periods while the air conditioning system is in operation.
- stopping the engine suddenly after high speed driving, so called after-boiling.

To avoid overheating, the following rules should be followed.

- Reduce speed and downshift when towing a trailer up long steep inclines. The risk of over heating can be reduced by switching off the air conditioning system for a short while.
- Do not let the engine idle unnecessarily.
- Do not stop the engine immediately after high-speed driving, but allow the engine to idle for 1/2 - 1 minute before switching off.

When the risk of overheating is imminent, or in the event of overheating, (the temperature gauge goes repeatedly into, or stays continually in, the red section) the following precautions should be taken:

- Switch off the air conditioning system and switch the heater to full (maximum) position.
- Stop the car and put the gear lever into neutral position-position N. Do not stop the engine!
- Increase the engine speed to approx. 2000 rpm (twice idling speed).
- Check the level of coolant in the expansion tank. Top-up, if necessary

pg. 75 Alternator, Jump starting

## Electrical System cautions

When changing the battery or when carrying out work involving the electrical system, the following should be observed:

- 1 A battery connection to the wrong terminal will damage the diodes. Before connections are made, check the polarity of the battery with a voltmeter.
- 2 If booster batteries are used for starting, they must be properly connected to prevent the diodes from being damaged. For correct connection, see "Jump starting".
- 3 The battery leads should be disconnected any time the battery is being charged.

4 Never disconnect the battery circuit (for example, to change the battery) while the engine is running, as this will immediately ruin the alternator. Always make sure that all the battery connections are cleaned and properly tightened.

5 If any electrical welding work is performed on the vehicle, the ground lead and all the connecting cables of the alternator must be disconnected and the welder wires placed as near the welding point as possible.

Jump starting

**CAUTION:** Improper hook-up of jumper cables or the use of other than 12 volt batteries could result in damage to equipment and/or battery.

Check that cars are not touching to prevent premature completion of negative circuit. Note the position of the battery terminals. When using jumper cables, first connect booster battery positive (+) terminal to car battery positive (+) terminal. Then connect booster battery negative (-) terminal to a stationary solid metal part on the engine at a point away from the battery. Do not connect booster cable to any part of fuel system or any moving parts. Avoid touching hot manifolds.

**WARNING!**

To prevent possible explosion, never expose battery to open flame or electric spark. Do not smoke near battery. Batteries generate hydrogen gas which is flammable and explosive.

Battery fluid contains sulfuric acid which can cause serious injury.

Do not allow battery acid to contact eyes, skin, fabrics or painted surfaces. If contact occurs, thoroughly flush affected area immediately with water.

Obtain medical attention immediately if eyes are affected.

After engine has started first remove negative (-) jumper cable, then positive (+) terminal jumper cable.

---

[Contents](#) | [Top of Page](#)

## Replacing bulbs

The replacement of bulbs in the various lighting units is shown on the following pages. Make sure when installing bulbs, that the guide pin on the socket fits into its corresponding recess.

When installing bulbs, do not touch the glass with your fingers. The reason for this is that grease, oil or any other impurities can be carbonized onto the bulb and damage the reflector.

Use bulbs of correct type and voltage. Failure to do so could activate the bulb failure warning light.

### Replacing headlight bulbs

Working inside the engine compartment, separate the socket contact from the bulb holder (1). Unscrew and remove the bulb holder retaining ring (2) Pull out the bulb holder assembly, and replace it as a unit (3).

Installation is the reverse of removal.

Check headlight alignment.

Bulb Power Trade No.  
Headlamp 45/65W 9004

## Front light bulbs

Loosen the Phillips screws and remove the lens. The bulbs can now be removed by pressing them inwards and turning them slightly counterclockwise.

When re-installing lens, check that the gasket is in position.

## Bulbs Power Socket

CP(W)

1 Front position 24/2.2(21/5) BaY15d

Side marker lights

2 Front turn signal 24/2.2(21/5) BaY15d 1) US Bulb No. 1157NA

pg. 77 Replacing bulbs

Tail lamp bulbs, sedan model

[www.ClassicCycles.org](http://www.ClassicCycles.org)

All tail lamp bulbs are replaced from inside of trunk.

1 Unscrew and remove tail lamp inside cover. Note that inside cover is hooked at the upper edge. Lift the lower end out up and unhook upper edge.

2 Turn bulb holder approx 3,8" (1 cm) counterclockwise and remove it.

3 Depress bulb n bulb holder turn it slightly counterclockwise and remove it.

4 Install a new bulb Install bulb holder in tail lamp.

NOTE: One of the bulb holder tabs is wider and fits only in corresponding recess.

Turn bulb holder clockwise. Check that bulb lights Replace tail lamp inside cover.

Power

\*Right side lamp holders are white. Left side lamp holders are black.

pg. 78 Replacing bulbs

Tail lamp bulbs, wagon model

All bulbs in the tail light cluster are removed from the inside.

Changing bulb, left hand side:

- Remove the spare tire cover and the spare wheel.

Changing bulb, right hand side:

- Remove the right hand stowage cover.
- Loosen the clip and move panel aside (see illustration).

The procedure for changing a bulb is basically the same as for other models.

When re-installing, hold the bulb holder with the word "Volvo" turned towards the center of the car.

Interior light 10 W S 8.5 - 8

Engine compartment light, Trunk light

Remove screw holding the light assembly Lift it out to remove.

Replace the bulb.

Reinstall by first inserting the guides into one side, then press in, the light assembly and install the screw.

### Bulb Power Socket

Engine compartment light 15 W S 8.5 - 8

Trunk light 15 W S 8.5 - 8

### Instrument and heater control lighting

Due to the location of these bulbs their replacement should be carried out by a Volvo dealer.

pg. 81 Fuses

### Replacing fuses

The fuse box is positioned in front of the left front door pillar. When replacing fuses, check that the correct amperage is used.

Never use fuses of higher amperage. unless specified by your Volvo dealer. If one fuse repeatedly fails, take the car to your Volvo dealer for fault tracing.

A spare fuse kit is available from your Volvo dealer.

**Warning: Turn starting (ignition) switch OFF before replacing fuses. Excessive heat may be created by a short circuit. Care must be exercised while replacing blown fuses.**

Some of the equipment listed below is optional

Refer to the fuse location chart at fuse box for fuses specific to your car.

- 1 Cigarette lighter, Power mirrors, Radio, Tailgate wiper/washer 8A
  - 2 Windshield wiper/washer, Horn 16A
  - 3 Heater blower 25A
  - 4 Fuel feed (in-tank) pump, Lambda-sond heating element 8A
  - 5 Turn signals, Back-up lights 16A
  - 6 Main fuel pump relay 16A
  - 7 Brake lights 8A
  - 8 Central locking, Interior and glove compartment lights, Trunk and engine compartment lights, Radio, Power antenna, Clock, Daytime running lights (Canada)\* 8A
  - 9 Hazard warning Flashers 8A
  - 10 Power windows 16A
  - 11 Heated rear window, 4th gear (automatic transmission) 16A
  - 12 Air conditioning (with blower control), Power windows (relay), Heated rear window (relay), Seat belt reminder, Cruise control 8A
  - 13 Heated front seats, Daytime running lights - relay (Canada)\* 16A
  - 14 Rear fog lights 8A
  - 15 Parking lights (left side), License plate light 8A
  - 16 Parking lights (right side), Instruments and control panel lights, Shift indicator light 8A
- Blade type fuse, serving LH-Jetronic fuel injection system. Located on the left wheel housing by the ignition coil 25A

\* Note: Early production Canadian vehicles are not equipped with Daytime Running Lights.

## Checking and correcting tire pressure

Check the tire pressure when refueling. The tire pressure should only be corrected when the tires are cold. With warm tires, correct only when the pressure is too low. The tire temperature (and, thus, pressure) rises after driving just a few miles.

**Warning: Improperly inflated tires will reduce tire life, adversely affect vehicle handling and can possibly lead to failure resulting in loss of vehicle control without prior warning.**

## Vehicle Loading

The tires on your Volvo will perform to specifications at all normal loads when inflated as recommended on the tire information label located on the rear facing side of the right front door. This label lists both tire and vehicle design limits.

Do not load your car beyond the load limits indicated.

## Tire Pressure Label

The tire pressure label is located on the rear facing side of the right front door.

See section titled "Specifications" and Consumer Information Booklet for complete tire pressure information.

## Wear indicator

The tires have a so-called "wear indicator in the form of a number of narrow strips running across or parallel to the tread. When approx 1/16 " (1.5 mm) is left on the tread, these strips show up and indicate the tire should be replaced.

Tires with less than 1/16" (1.5 mm) tread have a very poor grip in rain or snow.

## General

When replacing worn tires, it is recommended that the tire be identical in type (radial) and size as the one being replaced. Using a tire of the same make (manufacturer) will prevent altering the driving characteristics of the vehicle.

## How to improve tire economy

- Maintain correct tire pressure
- Drive smoothly: avoid fast starts, hard braking and tire screeching.

## Replacing wiper blades

Lift the wiper arm off the windshield and hold blade at right angles to arm. Pinch the end of the plastic clip located at the back of the arm.

Slide the wiper blade along the arm to release it from the hook.

Install new blade in reverse order to removing and make sure that it is properly attached to the wiper arm.

For reasons of safety, you should change the windshield wiper blades as soon as they start to leave marks on the windshield or fail to wipe efficiently and cleanly.

## Washing

The car should be washed at regular intervals since dirt, dust, insects and tar spots adhere to the paint and may cause damage.

When washing the car, do not expose it to direct sunlight. Use lukewarm water to soften the dirt before you wash with a sponge, and plenty of water, to avoid scratching.

A detergent can be used to facilitate the softening of dirt and oil. Special car washing detergent or household detergent can be used. A suitable mixture is about 2.5 fl. oz. (8.5 cl) of detergent to 2.6 US gal. =10 liters of warm water. After washing with a detergent the car should be well rinsed with clean water.

A water soluble grease solvent may be used in cases of sticky dirt. However, use a washplace equipped with a drainage separator.

Dry the car with a clean chamois and remember to clean the drain holes in the doors and rocker panels. Tar spots can be removed with kerosene or tar remover after the car has been washed.

Electrically operated antenna (optional) should be dried and lightly lubricated with an oil dampened

cloth.

**CAUTION:** It is particularly important to wash the car frequently in the winter time, to prevent corrosion, when salt has been used on the roads. Also wash off the dirt on the underside (Wheel housings and fenders etc.)

**WARNING:** When the car is driven immediately after being washed, carefully apply the brakes several times in order to remove any moisture from the brake linings.

pg. 87 Washing, Cleaning, Anti-rust treatment

### Automatic washing - simple and quick

An automatic wash is a simple and quick way to clean your car, but it is worth remembering that it can never be as thorough as when you yourself go over the car with sponge and water. Keeping the underbody clean is most important, especially in the winter. Some automatic washers do not have facilities for washing the underbody.

Before driving into an automatic wash, make sure that side view mirrors, auxiliary lamps, etc., are secure, otherwise there is risk of the machine dislodging them. You should also lower the antenna. We recommend that you do not wash your car in an automatic wash during the first six months (because the paint will not have hardened sufficiently).

### Bird droppings /Tree sap

Remove from paintwork as soon as possible. Otherwise the finish may be permanently damaged.

### Chromed parts

Chromium-plated and anodized parts should be washed with clean water as soon as they become dirty. This is particularly important if you drive on gravel roads or on roads where salt is used during the winter. After the car has been washed, apply wax or an anti-rust preparation.

Stains on chrome trim can be removed with commercially available chrome cleaner. Do not use abrasive compounds or steel wool.

## Polishing (waxing)

Normally, polishing is not required during the first year after delivery. Waxing may be beneficial. Before applying polish or wax the car must be washed and dried. Tar spots can be removed with kerosene or tar remover. Difficult spots may require a fine rubbing compound.

After polishing use liquid or paste wax.

Several commercially available products contain both polish and wax. Waxing alone does not substitute for polishing of a dull surface.

A wide range of polymer based car waxes can be purchased today. The waxes are easy to use and produce a long lasting high gloss finish which protects the bodywork against oxidation, road dirt and fading.

## Cleaning the upholstery

Generally the fabric can be cleaned with soapy water or a detergent. For more difficult spots caused by oil, ice cream, shoe polish, grease, etc., use a stain remover.

The plastic in the upholstery can be washed.

To clean leather upholstery, use soft cloth and mild soap solution, for instance common bath soap.

For more difficult spots, consult an expert for the choice of cleaning agent.

On no account must gasoline, naphtha or similar cleaning agents be used on the plastic or the leather since these can cause damage.

When aging, leather changes appearance, but the typical texture remains. To preserve smoothness and appearance, it is recommended to treat the leather with a special leather preservative after one or two years of use.

## Cleaning the seat belts

Clean only with luke warm water and mild soap solution.

**WARNING! Do not use cleaning solvents to clean the seat belts.**

## Cleaning floor mats

The floor mats should be vacuumed or brushed clean regularly, especially during the winter when they should be taken out for drying.

Spots on textile mats can be removed with a mild detergent.

### Anti-rust treatment

Your Volvo has been rust protected at the factory. On external surfaces a heavy coat of wear resistant material has been used, while on the internal surfaces a lighter rust inhibitor is used.

The rust protection should be inspected regularly by your authorized Volvo dealer. Consult the Volvo Protection Limited Warranty found in your Warranty Information Booklet for additional terms and conditions.

For further information, see section titled "What causes rust" or see your Volvo dealer.

pg. 88 Paint touch-up

### Paint touch-up

Paint damage requires immediate attention to avoid rusting. Make it a habit to check the finish regularly, for instance when washing the car. Touch-up if necessary.

Paint repairs require special equipment and skill. Contact your Volvo dealer for any extensive damages.

Minor scratches can be repaired by using Volvo touch-up paint.

Note: When ordering touch-up paint from your Volvo dealer, use the paint code indicated on the service label. The label is located on the wheel housing in the engine compartment.

### Minor stone chips and scratches

Material:

Primer-can

Paint-can or touch-up bottle

Brush

Masking tape

Note: When touching-up the car, it should be clean and dry. The surface temperature should be above 60 ° F (+15 ° C).

Scars on the surface

If the stone chip has not penetrated down to the metal and an undamaged layer of paint remains, the touch-up paint can be applied as soon as the spot has been cleaned.

Deep scars

If the stone chip has penetrated down to the metal, proceed as follows:

1 Place a strip of masking tape over the damaged surface. Pull the tape off so that any loose flakes of paint adhere to it.

2 Thoroughly mix the primer and apply it with a small brush.

When the primer surface is dry, the paint can be applied using a brush. Mix the paint thoroughly, apply

several thin paint coats and let dry after each application.

3 If there is a longer scratch, you may want to mask to protect surrounding paint.

Touching-up damaged paint on fender edges and sills

Material:

Primer-spray can

Paint-spray can

Masking tape

Note: When touching-up the car, it should be clean and dry. The surface temperature should be above 60 ° F (+15 ° C).

When large surfaces have to be repainted, suitably mask the surrounding area with masking tape and paper. Remove this masking as soon as the final coat has been sprayed on, before the paint dries.

1 Remove loose flakes of paint with masking tape. Shake the spray can for at least 1 minute. Spray the primer on.

2 Move the spray can slowly and regularly from side to side, about 8-12 inches (20-30 cm) from the surface.

**WARNING! Spray painting should be done in a well ventilated and dust-free area.**

3 When the primer has dried, apply the surface enamel in the same way. Spray on several times and allow the paint to dry a minute or so between each application.

pg. 90 What causes rust

What causes rust

The two most common causes of rust to your car are:

1. The accumulation of road dirt and moisture in hard-to-get-at cavities and other areas under the car.
2. The removal of paint and protective coatings on the outside of the car and underneath through damage by stones, gravel or minor accidents.

Several factors influence the speed at which corrosion will occur:

1. The length of time various parts of a car stay wet. Parts of the car filled with road dirt and water remain damp for long periods of time even after other parts have dried.

Particular attention should be paid to the underside of the car and floor sections inside. The floor sections stay wet because moisture collects and remains under the floor matting.

Drain holes located at the bottom of the doors can get clogged with dirt, trapping water inside the door and causing the door to rust through at the bottom.

2. Corrosion will be accelerated in areas of higher relative humidity, especially where temperatures often stay above the freezing point and where the atmosphere is affected by industrial pollution, or where salt is used for de-icing the roads.

Where parts of the car are covered with road dirt containing road salt, corrosion will be accelerated at a lower relative humidity than if the surface were clean.

3. Increased temperature will cause an accelerated rate of corrosion of those parts of the car which are not well ventilated to permit quick drying.

4. Industrial pollution and the presence of salt will also accelerate the deterioration of paint finishes.

The foregoing underscores the need for every car owner to keep his or her car, particularly the underside, as clean and dry as possible. Repair any minor damage to paint work and protective coating as soon as possible. The need is more important in those localities where road salt is used for de-icing, the relative humidity is higher, air pollution is present and temperatures regularly stay above freezing.

[Contents](#) | [Top of Page](#)

## Prior to a long distance trip

Have your car checked at a Volvo dealer. Preventive maintenance will help to ensure a trouble free trip. Remember to take along a Volvo dealer directory.

The main items to check are listed below:

1. Brakes, front wheel alignment and steering gear.
2. Engine running condition.
3. Fuel system operation.
4. Oil leaks: engine, transmission, rear axle.
5. Cooling system for leaks or worn hoses.
6. Examine tires carefully, replace worn tires.
7. Battery and terminals.
8. Tool equipment.
9. Lighting.
10. Drive belts, for tightness and wear.
11. All fluid levels.

## Cold weather/Engine fuel system

During the winter, large variations in temperature cause condensation to form in the fuel tank and can impair the running of the engine. This can be reduced by adding dry gas to the fuel. There is less risk of condensation forming in the fuel tank if it is kept full or nearly full.

## Engine cooling system

Volvo type C (blue-green) coolant should be used all year round. The cooling system should always contain water plus anti-freeze and rust inhibitor, even during the summer. Experience has also shown that extremely weak anti-freeze solutions (10-25 percent) are ineffective for rust protection. For this reason, the quantity of antifreeze/summer coolant should be about 50 percent of the solution. This lowers the freezing point to - 30 ° F (-35 ° C).

## Engine lubricating system

During the winter, multigrade oil 10W-30 should be used in the engine.

The viscosity of the engine oil is important. Oil with low viscosity (thinner oil) improves cold-weather starting as well as decreasing fuel consumption while the engine is warming up. To avoid difficult cold start conditions (during extreme winter weather), use of 5W-30 oil, particularly the synthetic type, is recommended.

Be sure to use good quality oil but do not use this cold-weather oil for hard driving or in warm weather. See section "Engine oil" for more information.

## Electrical system

The electrical system is subject to greater stresses during the winter. Lighting and starter motor are used more often. The battery capacity is reduced at low air temperature. The state of charge must be checked more frequently, and if necessary the battery should be recharged. The battery can freeze if the state of charge is too low.

## Windshield washers

Anti-freeze washer fluid should also be added to the washer fluid container for the windshield and rear window (tailgate, wagon model) washer.

This is particularly important during the winter because the windshield frequently becomes dirty and is often splashed with water which freezes rapidly. This may necessitate the frequent use of the windshield washer and wipers. Your Volvo dealer can supply you with suitable anti-freeze for this purpose. Suitable mixtures of anti-freeze and water are:

Down to +14 ° F (-10 ° C) 1 part anti-freeze 4 parts water.

Down to + 7 ° F (-14 ° C) 1 part anti-freeze 3 parts water.

Down to 0 ° F (-18 ° C) 1 part anti-freeze 2 parts water.

Down to -18 ° F (-28 ° C) 1 part anti-freeze 1 part water.

Use Volvo Teflon lock spray or grease in the locks. They can be purchased from your Volvo dealer

Note: Avoid the use of de-icing sprays as they can cause damage to the locks.

pg. 92 Service diagnosis

The diagnoses outlined below are intended to serve only as a guide to locate and temporarily correct minor faults. Causes of unsatisfactory performance should be investigated and corrected by your Volvo

dealer.

Condition: Starter fails to operate (or operates very slowly)

Possible cause	Correction
Weak battery or dead cell.	With the starting (ignition) switch in the "Driving" or "On" position, check to see if the warning lights on the dashboard come on and if they stay on when the starter is engaged. If the lights do not come on or if they go off when the starter is engaged, the battery is discharged or see below.
Loose or corroded battery cable terminals.	Check battery terminals and clamps. Clean or replace if necessary. Check that the starter cable is secure at its terminals. The ground strap, which connects the battery negative (-) terminal to the engine, should also be checked for corrosion or looseness.
Open circuit between starting (ignition) switch and starting (ignition) switch terminal on starter.	The circuit is closed if a clicking sound is heard from the starter when it is engaged. If no clicking sound is heard, check that the blue wire at the starter is secure. If still no clicking sound is heard, the starting (ignition) switch or the wire is defective.
Starter motor defective.	If the above checks have been performed, and no fault is evident, the starter may be defective. NOTE: In this case the headlight intensity will not dim when the starter is engaged.

Condition: Starter motor operates but engine does not start

Possible cause	Correction
Intake system leaking.	Check vacuum hose connections at manifold and auxiliary air valve.
No fuel reaching engine.	Check for fuel in the tank.  Check fuse No 4.
No spark	Check that the high tension lead from the coil to the distributor cap is connected and that the wires to the distributor and coil are connected.  Check the fuse for the engine control system. The fuse is located in the engine compartment on the left wheel housing by the ignition coil.
Spark plugs, high tension leads or distributor cap wet or defective.	Clean the parts with a dry cloth or spray with a moisture remover. Replace defective or worn parts.  If no fault is found following the above steps, contact your Volvo dealer.

Condition: Erratic idle (misfiring)

Possible cause	Correction
Intake system leaking.	Check hose connections.

Spark plugs, high tension leads or distributor cap worn (defective)	Clean distributor cap and leads, check the cap for cracks. Replace defective or worn parts.
Worn spark plugs.	Remove. Clean or replace spark plugs.

Condition: Engine stalls at irregular intervals

Possible cause	Correction
Defective wires.	Check wire terminals at: fuel pump, fuse No. 5 and 7, coil, distributor, ignition switch and relays.
Intake system leaking.	Check vacuum hose connections at manifold and auxiliary air valve.
Fuel filter clogged.	Clean fuel tank filter and replace line fuel filter.

pg. 95 Service diagnosis

Condition: Excessive fuel consumption

Possible cause	Correction
Fuel lines leaking.	Check tightness.
Spark plugs worn.	Replace plugs.

Condition: Misfiring at highway driving speed

Possible cause	Correction
Spark plugs fouled.	Drive the vehicle in a lower gear and keep the engine rpm higher for a few miles in order to remove carbon deposit on the spark plugs. If this procedure is not effective, clean or replace the spark plugs.

pg. 96 Label information

The Vehicle Identification Number should always be quoted in all correspondence concerning your vehicle with the dealer and when ordering parts.

1 Vehicle Identification Number (VIN)

VIN plate is located on top left surface of dash. The VIN is also stamped on the right hand door pillar.

2 Vehicle Emission Control Information

Your Volvo is designed to meet all applicable safety and emissions standards. Evidence of this can be verified from the certification label on the left wheel valance. For further information regarding these regulations, please consult your Volvo dealer.

3 Model Plate

Vehicle Identification Number (VIN). Codes for color and upholstery etc. This plate is located on right wheel valance.

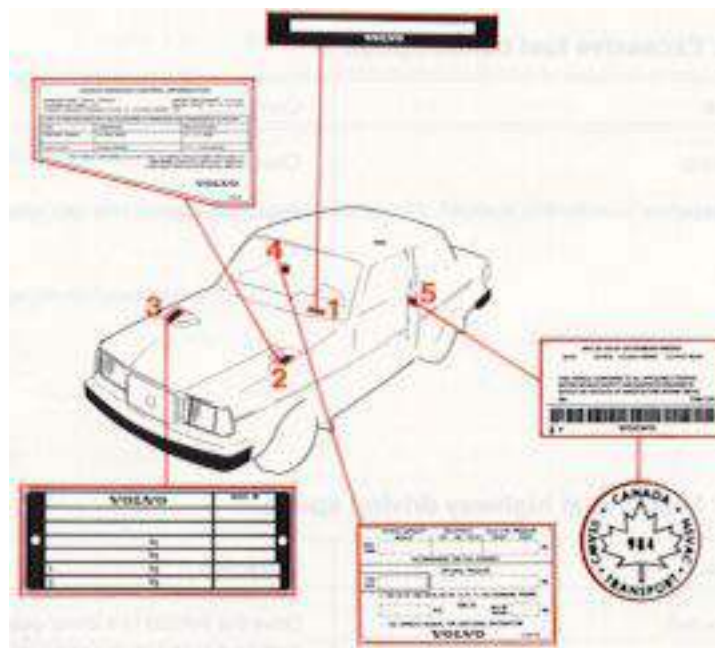

4 Loads, Capacities, and Tire Pressures

5 Federal Motor Vehicle Safety Standards (FMVSS) specifications (USA) and Ministry of Transport (CMVSS) Standards (Canada)

This label is located on rear facing side of the driver's front door.

### Vehicle Loading

The tires on your Volvo will perform to specifications at all normal loads when inflated as recommended on the tire information label located on the rear facing side of the right front door.

This label lists both tire and vehicle design limits.

Do not load your car beyond the load limits indicated.

See Consumer Information Booklet for complete tire pressure information.

pg. 104 Volvo Service Manuals

Service Manuals for your Volvo are available for purchase. These are the same used by competent Volvo technicians. Each major system in the car is covered by an individual Manual. These are grouped into ten sections and placed into a binder system. (Note that manuals and binders may be obtained separately or in preassembled sets.)

Major sections within the binder system include: 0-General Information; 1-Service and Maintenance; 2-Engine; 3-Electrical System and Instruments; 4-Power Transmission; 5-Brakes; 6-Suspension and Steering; 7-Frame, Springs, Dampers and Wheels; 8-Body; 9-Accessories and Other Equipment.

A Service Manual Brochure/Order Form was placed in the car prior to delivery from the dealer to you. Complete ordering information is provided.

Please note that these manuals may be offered for sale by your Volvo dealer. Prices charged by the dealer can vary from those listed in the brochure (according to Federal law).

Additional copies of the Brochure/Order Form may be obtained from your Volvo dealer, or by mail directly from:

Volvo Cars of North America  
Rockleigh Industrial Park

Rockleigh, New Jersey 07647

Attention: Volvo Service Literature

Note that the above pertains to vehicles sold in the U.S.A. only. Canadian owners should contact their authorized Volvo dealer to obtain Service Manuals.

Volvo supports Voluntary Mechanic Certification by the N.I.A.S.E. Certified mechanics have demonstrated a high degree of competence in specific areas. Besides passing exams each mechanic must also have worked in the field for two or more years before a certificate is issued. These professional mechanics are fully able to analyze vehicle problems and perform the necessary service procedures to keep your Volvo at peak operating condition. Note! The above pertains to USA only.

pg. 105 Road assistance

Your new Volvo comes with a three year road assistance program known as ON-CALL. Additional information, features, and benefits are described in a separate information package in your glove compartment.

When refueling always check:

Oil level between dipstick marks. The distance between the marks represents approx. 1 US qt. = 1 liter. Fill with multigrade oil

Check without removing the cap that the brake fluid level is above the Min-mark. Brake and clutch fluid DOT 4.

Coolant level between the expansion tank marks. Mixture: 50 percent anti-freeze and 50 percent water.

Washer fluid reservoir should be filled with water and solvent (wintertime: windshield washer anti-freeze).

Electrolyte level 1/4" - 3/8" (5 - 10 mm) above plates. Fill distilled water only, never acid. Check level in conjunction with normal service or once a year.

Never operate engine in closed unventilated areas.

Changing a wheel, see pages 84, 85

a bulb, see pages 76-80

a fuse, see page 81

Fuel: Octane rating 95 RON Unleaded, 91 (R+M)/2

Min. 91 RON Unleaded, 87 (R+M)/2

**WARNING!**

**Detergents and solvents**

Do not use gasoline containing lead or benzene as a detergent or solvent. Both lead and benzene are toxic and may be hazardous to your health.

**WARNING!**

Carbon monoxide is a poisonous colorless and odorless gas which is present in all exhaust gases. If you ever smell exhaust fumes inside the vehicle, make sure the passenger compartment is ventilated and immediately return the vehicle to dealer for correction.

Never sit in a parked or stopped car for any extended amount of time, nor have it unattended while engine is running.

Never operate the engine in confined, unventilated areas.
